Richter Lined Check Valves

Lining PFA, PTFE, PFA-L antistatic
Liquids, vapours and gases
Vertical, inclined or horizontal installation

Publication No. 146en 02.16 © Richter Chemie-Technik GmbH. Subject to change without notice. Printed in Germany.
Richter check valves

They prevent from back-flow of liquids, gases and vapours in pipelines.

They are installed
• e.g. in the discharge line, directly downstream of the pump, to prevent the siphoning of the pump or pump rotation in the opposite direction as a result of back-flowing liquids
• when vessels have to be vented/aerated within approximate setting ranges.

Richter check valves are designed
• for media where stainless steel does not offer lasting corrosion resistance
• as an alternative to valves made of exotic expensive metals (Hastelloy®, Monel®, tantalum etc.)
• for pure and slightly solids-laden media
• for metal-reactive media, e.g. H₂O₂
• for pure media where good cleaning possibilities and anti-adhesive surfaces are important.

Operating range:
Depending on design and material
• from -60 to +180 °C (-75 to 360 °F) with EN-JS 1049
• from -29 to +180 °C (-20 to 360 °F) with ASTM A395
• from vacuum up to 16 bar (235 psi)

Installation and connecting dimensions
• ISO/DIN: face-to-face lengths DIN EN 588-1, basic series 1 (ISO 5752, basic series 1).
  Flange connecting dimensions: DIN EN 1092-2, shape B (ISO 7005-2, type B), on request drilled to ANSI 150
• Face-to-face lengths Peabody-Dore (BC/BCV series)
• ANSI/ISA- 75.08.01 Cl. 150 with flanges acc. to ASME B16.5
  Cl. 150 raised face (series GR)
• ANSI/ISA- 75.08.01 Cl. 300 with flanges acc. to ASME B16.5
  Cl. 300 raised face for series GR 1", 1/2", 2" on request.

Series selection
The operating conditions are so varied that the Richter range contains a large number of check valves:

* Guidance in centre under ball

Lining virgin pure PFA or PTFE
• Suitable for corrosive, hazardous, pure, hot and highly permeating media
• Thick-walled, high permeation resistance
• Vacuum-resistant anchoring
• Lining optionally antistatic available

Shell made of ductile cast iron
EN-JS 1049 (ASTM A395) absorbs system and pipe forces

Shut-off elements: solid and hollow balls as well as solid and hollow plugs made of PTFE. For special cases made of stainless steel, Hastelloy® etc.
• Series GR and RV generally gas-tight sealing.

Horizontal, inclined or vertical installation

External corrosion protection
Epoxy coating, nuts and bolts of stainless steel.

Identification DIN EN 19,
ASME B16.34

PED Pressure Equipment Directive
The valves are suitable for liquids, vapours, gases of group 1.
CV, CVV (ISO) and BC, BCV (ASME) series

Installation: horizontal, inclined, vertical pipe
- CV, BC series: with solid ball
- CVV, BCV series: with hollow ball
- Tightness: DIN EN 12266-1, leakage rate D, test medium gas

These ball check valves have a hydraulically optimised design. The lining thickness of 4 to 5 mm offers very high permeation resistance.

The CV and BC series with a solid ball seal against a falling or back-flowing liquid.

The CVV and BCV versions with a hollow ball can also be used for low opening differential pressures. If the installation position is reversed, CVV and BCV can also work as vacuum check and aeration valves. When installed vertically, the ball then floats on the rising liquid and seals upwards into the seat.

When installed horizontally, a minimum differential pressure of 1 bar (14.5 psi) – with a hollow ball 0.5 bar (7.25 psi) – is necessary so that the ball is pressed into the seat.

GR series

Installation: horizontal pipe
- Only with solid plug
- Tightness: gas-tight to DIN EN 12266-1, leakage rate A, test medium gas

GR check valves are designed as plug valves and intended for horizontal installation. Seat and plug are exchangeable.

Thanks to the top-entry design, the valve can be opened from the top and serviced.

Lining thickness: 5-6 mm, DN 15+20 (1/2" + 3/4") 3.5-4 mm.

Fig.: CV, BC series, vertical installation, sealing against falling liquid.

Fig.: GR series, horizontal installation, sealing against back-flowing liquids, vapours, gases
SR, SRV, SR-B, SRV-B and SRZ-V series with integrated sight glass

Installation: horizontal, inclined, vertical (SRZ-V, only vertical) pipe
- SR series with solid ball
- SRV series with hollow ball
- SR-B series with solid ball and soft-sealing seat
- SRV-B with hollow ball and soft-sealing seat
- SRZ-V series with hollow plug and soft-sealing seat

Tightness:
- SR and SRV: DIN EN 12266-1, leakage rate D, test medium gas
- SR-B, SRV-B, SRZ-V: gas-tight to DIN EN 12266-1, leakage rate A, test medium gas

These series make it possible to observe the function of the check valve through thick sight glasses made of borosilicate glass to DIN 7080.

The functions of a straight-through sight glass are fulfilled.

The solid ball SR and SR-B versions seal against a falling or back-flowing liquid.

The SRV and SRV-B versions with hollow balls can also be used for low opening differential pressures. With reversed installation position, SRV and SRV-B also function as vacuum check and aeration valves. The ball then floats on the rising liquid and seals upwards into the seat.

When installed horizontally, a minimum differential pressure of 1 bar (14.5 psi) – with a hollow ball 0.5 bar (7.25 psi) – is necessary to press the ball into the seat.

The hollow plug version SRZ-V functions in the same way as SRV and SRV-B but for a much larger pressure/temperature range, see diagram on page 5.

Examples:
- PFA PFA-L: 8.5 = PFA conductive (antistatic)
- k\textsubscript{f} in m\textsuperscript{3}/h (water 20 °C, 68 °F). Conversion to CV = k\textsubscript{f} x 1.165 (US gpm) or CV = k\textsubscript{f} x 0.971 (IM gpm)
- SRV-Z: only DN 25-50 (1 + 2°)
Other Richter check valves

**RV series**
- Installation: vertical pipe
- -60 to 180 °C (-75 to 360 °F)
- Vacuum 100 mbar to 10 bar (1,45 to 145 psi)
- DN 150 (6"), face-to-face 240 mm, k-value 400 m³/h (1760 US gpm) and DN 200 (8"), 280 mm, 500 m³/h (2200 US gpm)
- Gas-tight to DIN EN 12266-1, leakage rate A, test medium gas
- Body: ductile cast iron EN-JS 1049 (ASTM A395), lining PTFE
- Seat and plug exchangeable
- Flanges ISO 7005-2 PN16, on request drilled to ASME Cl.150 (ISO 7005-2 PN20)

**PRS series**
- Installation: horizontal and vertical pipe
- -60 to 50 °C (-75 to 120 °F)
- Vacuum to 16 bar (235 psi)
- DN 25 (1"), face-to-face 160 mm
- Gas-tight to DIN EN 12266-1, leakage rate A, test medium gas
- Body: ductile cast iron EN-JS 1049 (ASTM A395), lining PTFE
- Plug, guide etc. exchangeable
- Flanges ISO 7005-2 PN16, on request drilled to ASME Cl. 150 (ISO 7005-2 PN20)

Details on pressure/temperature range, materials, dimensions, etc. on request
